

# Making Data Security and Compliance Easy for Hospitals

*SecureData makes critical data security easy to implement for doctors, executives, hospital staff, and IT personnel*

## The Need

Western Reserve Hospital needed a way to tighten security during their daily business operations. “To help ensure compliance, we had to enhance our security to make sure that any portable data was encrypted and could be remotely wiped if the device is ever lost or stolen,” said Manager of IT&S Operations Vince Allen.

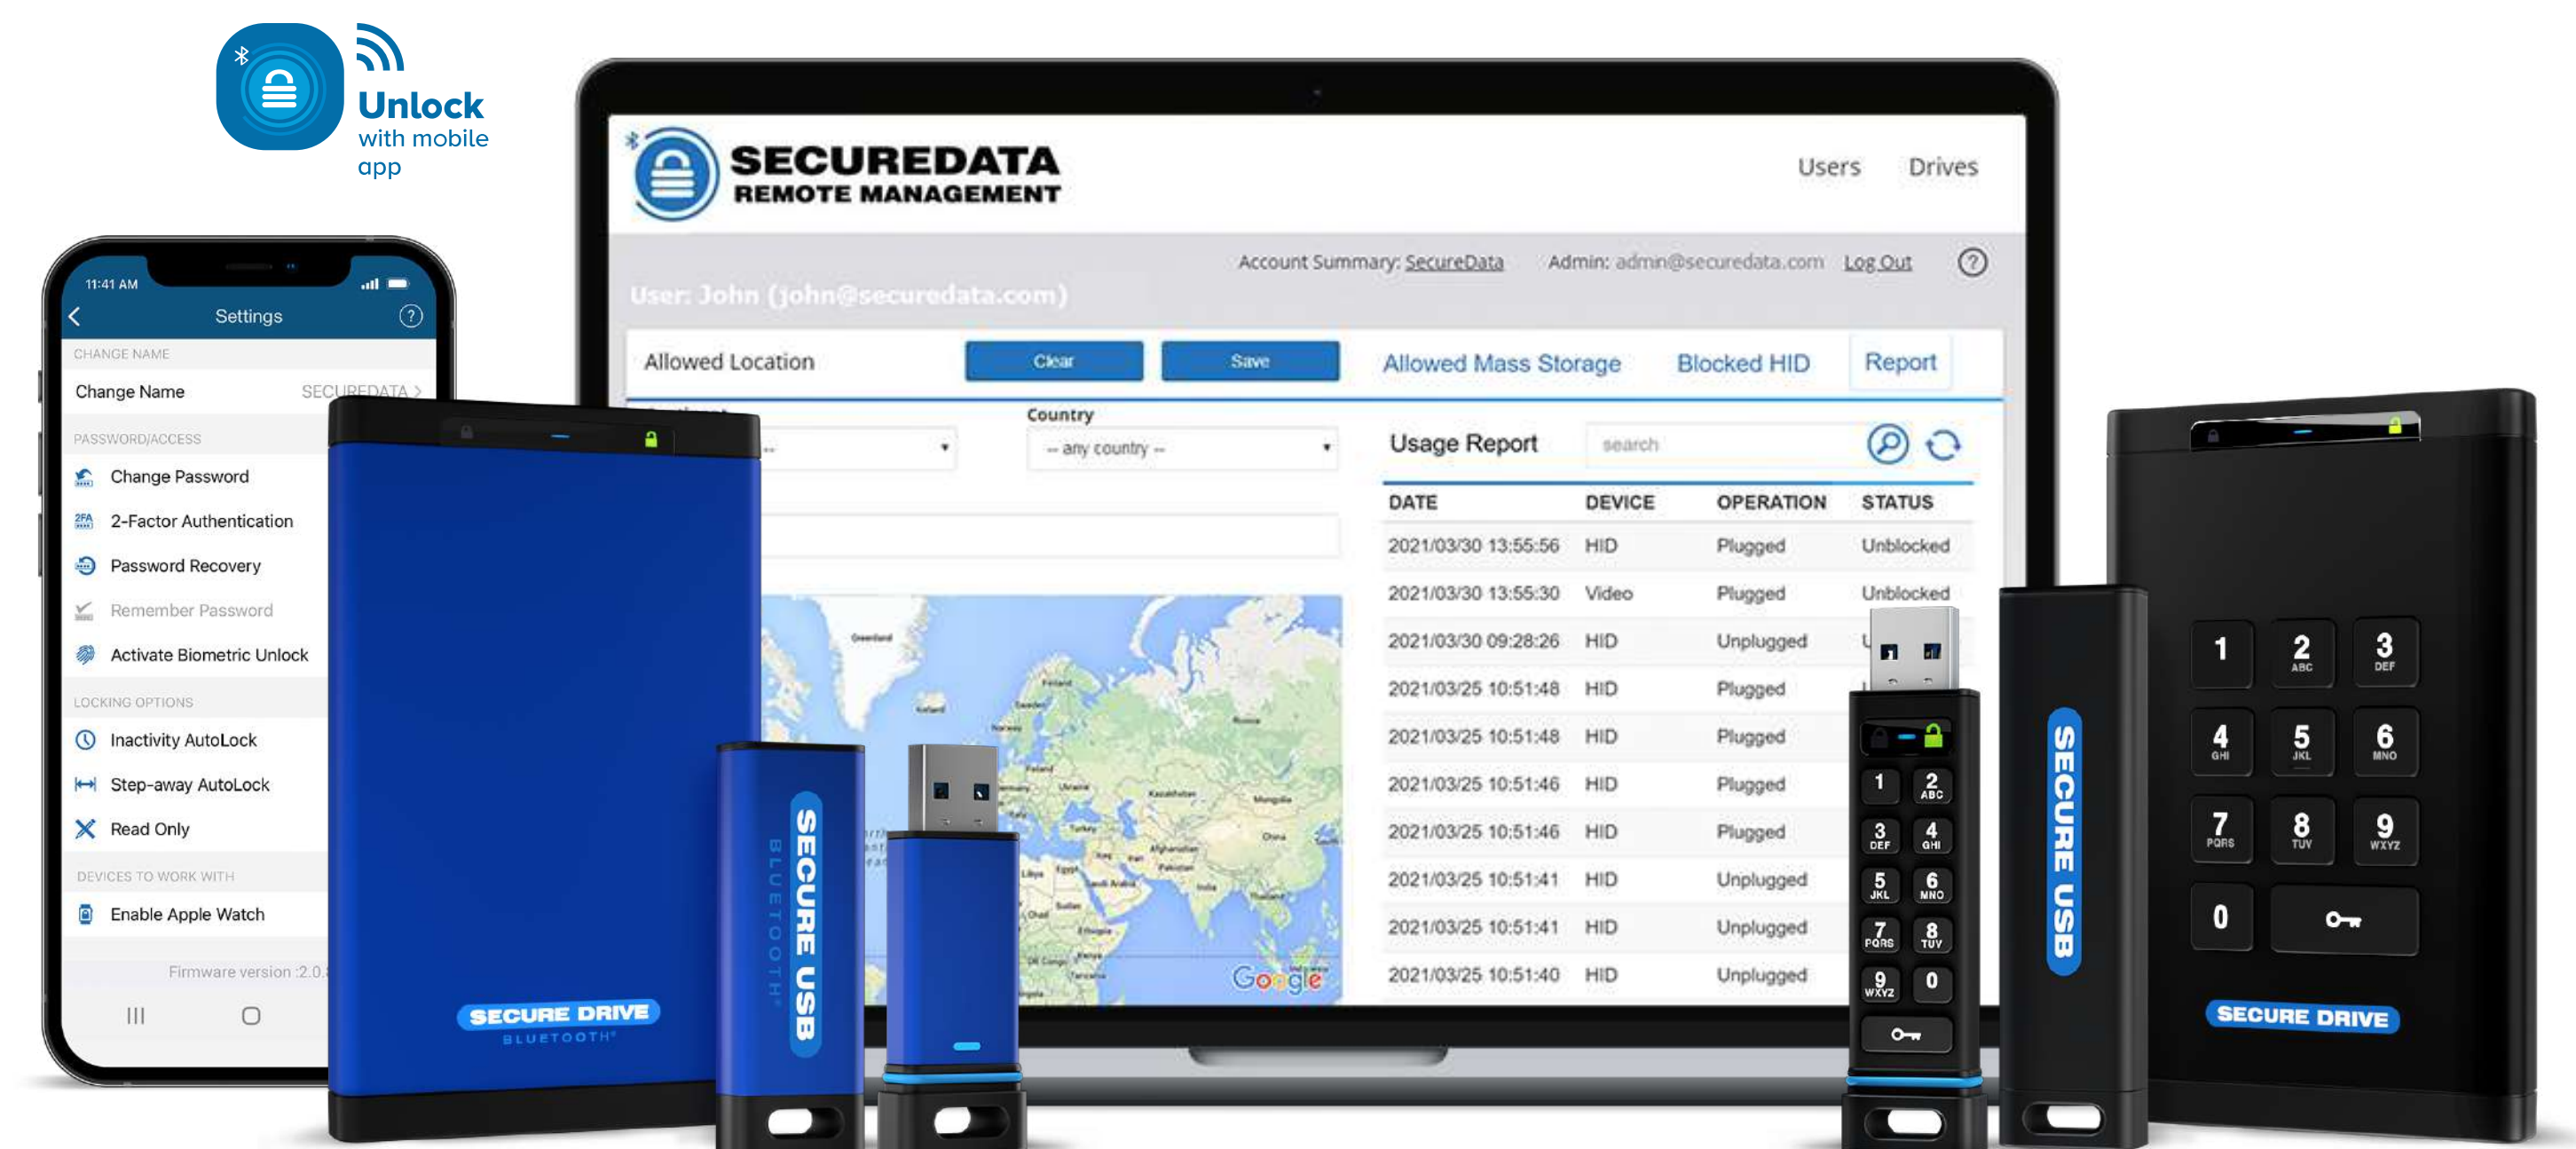

## The Solution

Doctors and hospital managers often have to share information or give presentations. Sometimes, multiple employees need to access the same drive. Western Reserve Hospital needed a more customizable solution to meet their data security needs.

Western Reserve Hospital bought a combination of our FIPS 140-2 Level 3 validated external portable drives and flash drives: the KP and BT lines of our SecureDrive and SecureUSB models. They also added an extra layer of security by adding Remote Management licenses, which give IT administrators full control over where, when, and how BT drives can be accessed, as well as to remotely wipe drive contents in case of the loss or theft of a drive.

## The Impact

Mr. Allen rated our drives a “10 out of 10” and cited their ease of use as well as their superior security features. “I’ve had zero complaints from my users, which are doctors, hospital staff, and my IT team. No additional IT support is necessary after the initial set up,” he stated. Physicians, administrators, and support staff at Western Reserve Hospital rely on SecureDrive and SecureUSB devices to keep their patients’ sensitive health data protected at the hospital, in transit, or wherever it might need to be accessed.

## SecureDrive/SecureUSB Features

- ✓ OS/Host-independent; work across all systems and devices with a USB port
- ✓ Password authentication to access drives
- ✓ FIPS 140-2 Level 3 Validated
- ✓ AutoLock and Read Only capabilities
- ✓ Storage: SecureDrive—250 GB – 8 TB; SecureUSB—8 GB – 128 GB

## KP Features

- ✓ Onboard keypad
- ✓ Time-Out AutoLock
- ✓ User and Admin modes

## BT Features

- ✓ Authentication via free mobile app
- ✓ Unlock via Touch ID or Face ID
- ✓ Time-Out and Step-Away AutoLock
- ✓ Remote Management-ready

## Remote Management

- ✓ Time-Fencing and Geo-Fencing to restrict to certain times and/or places of use
- ✓ Remote Wipe
- ✓ From one location, manage drives wherever they are
