SECUREDATA CAPABILITY STATEMENT

CORE COMPETENCIES

SecureData, Inc. provides a full-range of hardware-encrypted data storage products, SecureDrive and SecureUSB, that use either a keypad or a smartphone-authenticated app to unlock the drive. Optional Bluetooth (BT) models are remote-management ready and provide auditability to know when, where, and by whom the device was last accessed. Designed to safeguard critical Data-at-Rest (DAR) and in-transit, all SecureData products meet the storage needs of enterprise, Military and Governmental customers worldwide, and use Military-grade XTS-AES 256-bit encryption. With NIST certificates on-file, our products are designed to meet and exceed FIPS 140-2 Level 3 validation criteria including capabilities to manage devices remotely.

All of our products are designed and assembled in the United States and meet Trade Agreements Act (TAA) requirements for shipment worldwide. SecureData, Inc portable storage products, Flash, SSD and HDD, have won numerous awards including Red Dot and CES Product of the year.

PAST PERFORMANCE

Our products have been deployed throughout the Federal Government, including:

- US Dept of Defense
    - Office of the Secretary of Defense (OSD)
    - Defense Information Systems Agency (DISA)
    - Special Operations Command (SOCOM)
    - Southern Command (SOUTHCOM)
    - Space Force
    - Army
    - Navy
    - Air Force
- US Dept of Justice (DOJ)
- US Dept of Homeland Security (DHS)
- US General Services Administration (GSA)
- US Dept of Agriculture (USDA)
- US Dept of Transportation (DOT)
- US Dept of Health & Human Services (HHS)
- US Courts
- US Dept of Interior (DOI)

Additionally, we work with numerous Federal Primes/ System Integrators, and with many of the top Silicon Valley tech companies today. Our products meet the high data security and data privacy standards of these departments and companies ensuring data on carried USB devices are protected.

DIFFERENTIATORS

All SecureData products are built with the highest-quality components available which are embedded into ultra-thin, aircraft-grade extruded aluminum enclosures making them the thinnest lowest-profile on the market. All drives are OS/Host independent to work with Windows, Mac or Linux and require no software drivers. OS/Host-independent Remote Management tool allows admins to know who, when, and where phone-authenticated devices were last used and provide an audit trail of all activity. Manufactured and assembled to prevent tampering, with built-in brute force anti-hacking technology, the drives are designed to meet Military-grade applications on devices deployed on disparate systems.
